Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 08 August 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

1. Applicant's election of species group 1 in the reply filed on 8/8/2005 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 3 and 7-14 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 8/8/2005.
3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
4. Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Aharon. Aharon discloses a faucet adaptor with a sensor unit 70, 72 and a controller 5 that senses the proximity of a user's hand wherein the controller unit 5 of figure 7 is capable of being retrofitted onto an existing manual faucet as claimed. In regard to claim 4, figures 9 and 10 disclose the use of multiple infrared sensors with various wide detection ranges as claimed.
5. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Patterson et al./503. Patterson discloses a faucet adaptor with a sensor unit 84 and a controller 57

that senses the proximity of a user's hand wherein the housing 38 is capable of being retrofitted onto an existing manual faucet as disclosed in paragraph 10.

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Patterson et al./503 in view of Patterson et al./293. Patterson/503 discloses a retrofitted proximity sensor for a gooseneck type faucet substantially as claimed but does not disclose how the generic housing 38 is attached to the faucet pipe 42. However, Patterson/293 teaches another retrofitted proximity sensor for a gooseneck type faucet having a clamp 60 for the purpose of providing a conveniently and adjustable means to attach a proximity sensor housing to sink plumbing. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the housing of Patterson/503 with clamp as, for example, taught by Patterson/293 in order to provide a conveniently and adjustable means to attach a proximity sensor housing to sink plumbing.

8. Claims 5 and 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
